

## CLAIM LISTING

1. (currently amended) Apparatus for scanning an image and printing copies of the image on a sheet, the apparatus comprising:

a scan module;

a print module;

an input device for allowing a selection of an entry identifying a set of differing photo sizes ~~a plurality of different standard photo sizes to be selected for the purpose of causing a plurality of different sizes of an original to be printed~~; and

a controller operable, upon a determination that the entry identifying the set of differing photo sizes has been selected, to:

cause the scan module to scan an image[[s]] from the originals ~~of one of a plurality of varying sizes in response to a selection via the input device~~;

automatically determine actual size[[s]] of the scanned image ~~images~~;

automatically scale a first copy ~~copies~~ of [[a]] the first scanned image ~~of an original~~ to a first ~~selected~~ photo size identified by the entry;

automatically scale a second copy ~~copies~~ of [[a]] the second scanned image ~~of that original~~ to a second selected photo size identified by the entry, the second selected photo size being different than the first selected photo size;

automatically cause the print module to print one or more of the scaled first copy ~~copies~~ on a first sheet; and

automatically cause the print module to print one or more of the second scaled copy ~~copies~~ on a second sheet.

2. (cancelled)

3. (previously presented) The apparatus of claim 1, further comprising a means for rotating at least one copy to utilize maximum printable area on the first or second

sheet.

4. (previously presented) The apparatus of claim 1, wherein the input device is configured to display selectable entries each corresponding to a different standard photo size.

5. (cancelled).

6. (currently amended) Apparatus for scanning an image and printing copies of an image on a sheet, the apparatus comprising

a scan module;

a print module;

an input device for allowing a selection of an entry identifying a set of differing photo sizes for the purpose of causing a plurality of different sizes of an original to be printed ~~a plurality of different standard photo sizes to be selected~~; and

a ~~controller~~ means for causing the scan module to scan an ~~the~~ image from the originals of ~~a plurality of sizes~~ in response to a selection of the entry via the input device, ~~the controller~~ automatically determining actual size of the scanned image, automatically generating a first copy of the scanned image ~~copies that are scaled to a first selected photo size~~ identified by the entry, automatically generating a second copy of the scanned image ~~copies that are scaled to a second selected photo size~~ identified by the entry, the second selected photo size being different than the first selected photo size, and automatically causing the print module to print one of more of the first copy ~~copies~~ on a first sheet and to then print the one or more of the second copy ~~copies of the scanned image~~ on a second sheet.

7. (Original) The apparatus of claim 6, wherein the apparatus is an All-in-One machine.

8. (cancelled)

9. (previously presented) The apparatus of claim 6, wherein the input device is configured to prompt for additional standard sizes.

10. (cancelled)

11. (cancelled)

12. (previously presented) The apparatus of claim 1, wherein the controller is operable to cause the print module to print the first and second copies of the scanned image on the first and second sheets using a single resolution for printing photos.

13. (previously presented) The apparatus of claim 1, wherein the controller is operable to cause the print module to print the first and second copies of the scanned image on the first and second sheets using a single resolution for printing photos and mixing color dots to create colors.

14. (previously presented) The apparatus of claim 4, wherein at least one entry is configured to convey information that is at least indirectly related to a maximum printable area on a sheet.

15. (Previously Presented) The apparatus of claim 4, wherein the standard photo sizes are in metric units of measure.

16. (Previously Presented) The apparatus of claim 4, wherein the standard photo sizes are in English units of measure.

17. (Previously Presented) The apparatus of claim 1, wherein the original is a photograph.

18. (withdrawn) The apparatus of claim 1, further comprising a computer attached to the print module, the computer further comprising:

a microprocessor; and  
a memory, the memory further including a program stored therein for causing the computer to display a virtual console.

19. (Previously Presented) The apparatus of claim 1 wherein the apparatus is a digital copying machine.

20. (previously presented) The apparatus of claim 6, wherein the print module is configured to print the first and second copies of the scanned image on the first and second sheets using a single resolution for printing photos.

21. (previously presented) The apparatus of claim 6, wherein the print module is configured to print the first and second copies of the scanned image on the first and second sheets using a single resolution for printing photos and mixes color dots to create colors.

22. (currently amended) The apparatus of claim 32, wherein the input device allows for a selection of an entry identifying a set of differing photo sizes ~~includes a set of entries for different standard photo sizes~~ corresponding to maximum printable area on a sheet.

23. (Previously Presented) The apparatus of claim 6, wherein the selected photo sizes are in metric units of measure.

24. (Previously Presented) The apparatus of claim 6, wherein the selected photo sizes are in English units of measure.

25. (Previously Presented) The apparatus of claim 6, wherein the original is a photograph.

26. (Withdrawn) The apparatus of claim 6, wherein the controller is part of a

computer system communicatively coupled to the print module and the scan module, the computer further comprising a memory including a program stored therein for causing the computer to display a virtual console.

27. (Withdrawn) The apparatus of claim 6, wherein the input device is a computer display.

28. (Withdrawn) The apparatus of claim 6, wherein the input device is a computer display of a virtual console.

29. (Previously Presented) The apparatus of claim 6, wherein the apparatus is a digital copying machine.

30. (cancelled)

31. (cancelled)

32. (currently amended) The apparatus of Claim ~~[[6]]~~ 1, wherein the controller is operable to:

automatically position the scaled first scanned image copies to utilize maximum printable area on the first sheet; and

automatically position the scaled second scanned image copies to utilize maximum printable area on the second sheet.
